

You can see the whole map. Now for the one road that matters.

Everything your kid asked for is attached. Here's what each piece does — and the one thing the free package deliberately leaves for later, because that's where the real decision lives.

WHAT'S IN YOUR PACKAGE

- ✓ **The index** — all 28 careers ranked, so you can see which fields even belong on the list.
- ✓ **The Planning guide** — the six-move framework for choosing a lane that lasts.
- ✓ **Three samplers** — a full read on the careers your kid is weighing.

WHAT YOU STILL NEED — AND WHY IT DECIDES EVERYTHING

THE ONE THING THE FREE PACKAGE LEAVES OUT

For the career your kid actually commits to: **which exact track to aim at**, how durable that protection really is once AI keeps pushing, whether a given programme actually delivers it, and the honest downsides no admissions page will admit.

Your kid doesn't enrol in 'a field.' They enrol in one programme and take one first job — and the entire safe-versus-exposed difference lives at *that* level, exactly where the free scores stop. Getting the field right but the track wrong is the most expensive mistake in this whole process. It's the one thing the free package can't protect you from — and the one thing the full profile is built to.

HOW THE FULL PROFILE CLOSSES IT

The Planning Edition of the Career Value Guide, for the careers that matter most: **every track scored and the safe/exposed split** · how durable each protection is · routes in · a programme checklist and the questions to ask admissions · where the degree leads later.

For the one or two your kid is serious about, that's **\$19–39 and an afternoon** — against a decision worth years and tens of thousands. Start any career at **pivotum.ai**.
