

You've got the strategy. Now for your specific route.

Everything your kid asked for is attached. Here's what each piece does — and the one thing the free package deliberately leaves for later, because that's where the real move is made.

WHAT'S IN YOUR PACKAGE

- ✓ **The index** — all 28 careers ranked, reframed to find your field's safe lane.
- ✓ **The Active guide** — the six moves for protecting value from where your kid stands.
- ✓ **Three samplers** — a full read on the careers that matter to your family.

WHAT YOU STILL NEED — AND WHY IT DECIDES EVERYTHING

THE ONE THING THE FREE PACKAGE LEAVES OUT

For your kid's field specifically: **the exact bridge** from the exposed lane they're probably in to the safe one, which adjacent fields their credential actually opens, and the senior roles to start aiming at now.

'Protect your value' is a direction, not a route. The strategy is the same for everyone; the bridge is different for every field and every starting point. That specific route — from where your kid actually stands — is the difference between knowing they should move and knowing their next three steps. The free guide points at it. The Career Value Guide draws it.

HOW THE CAREER VALUE GUIDE CLOSES IT

The Active Edition of the Career Value Guide, for the careers that matter most: **every track scored and the split** · your exposed lane → the safe lane → the steps between · adjacent-field exits · pre-built senior-role targets.

SEE EXACTLY WHAT IT LOOKS LIKE — ONE GUIDE, IN FULL, FREE

We publish the entire **computer science** Career Value Guide free, so you can judge the depth before buying a thing:

Entry-level developer **8.1** · Senior engineer **5.4** · Safety-critical **4.7** — one field, three very different futures.

- Which protections are durable (someone must own the system when it fails) and which are eroding (routine design is going; genuine architectural novelty holds).
- What an AI-native developer actually looks like — and the concrete steps to become one.
- The honest downsides, who the work really suits, and the exact bridge to the safe lane.

Read it in full at pivotum.ai/careers/computer-science — then get the same for the careers that matter to your kid.

For the one or two your kid is serious about, that's **\$49–99 and an afternoon** — against a decision worth years and tens of thousands.

1 career \$49 · 3 for \$69 · unlimited \$99 — start any career at pivotum.ai
